

PROFESSIONAL SUMMARY

- Junior Java Developer with hands-on experience developing and supporting backend and full-stack applications within financial and enterprise environments.
- Experienced in building Spring Boot-based RESTful services, contributing to API design, request validation, and backend business logic implementation.
- Practical exposure to Hibernate and Spring Data JPA for entity mapping, transactional data handling, and persistence-layer development.
- Familiar with microservices-based architectures, supporting service communication, configuration management, and modular backend design.
- Experience integrating backend services with React and Bootstrap-based user interfaces, supporting secure and responsive application workflows.
- Working knowledge of relational databases, including MySQL, with hands-on experience in CRUD operations and basic query optimization.
- Comfortable working in Agile Scrum teams, contributing to unit testing, code reviews, documentation, and collaborative development practices.

EDUCATION

- Florida International University | Miami, FL | Bachelor of Science in Computer Science | *Dec 2024*
Track: **Software Design & Development**

TECHNICAL SKILLS

Backend & Java Development	Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices
Frontend & UI Development	React, JavaScript, TypeScript, HTML5, CSS3, Bootstrap
Databases	MySQL, SQL Server
Cloud & DevOps	AWS, Azure, Docker, Git, GitHub
Testing & Tools	JUnit, Mockito, Postman, xUnit, Jest
Development Practices	Agile/Scrum, Code Reviews, Debugging, Technical Documentation
Servers:	Apache Tomcat, WebLogic, JBoss, WebSphere
Platforms:	Windows, Linux, UNIX

PROFESSIONAL EXPERIENCE**Junior Java Developer
Plaid****July 2025 – Present
Miami, FL**

- Develop and maintain Java-based backend services using Spring Boot, supporting secure data processing and service communication within financial systems.
- Design and enhance RESTful APIs, ensuring consistent request handling, validation, and structured responses for downstream consumers.
- Implement persistence logic using Hibernate and Spring Data JPA, mapping entities and supporting transactional workflows.
- Contribute to microservices-based backend components, assisting with service separation, configuration management, and inter-service communication.
- Work with MySQL databases to perform CRUD operations, manage schema updates, and support basic query optimization.

- Assist with input validation, exception handling, and structured logging, improving service reliability and maintainability.
- Integrate backend services with React- and Bootstrap-based frontend components, supporting end-to-end feature delivery.
- Write and execute unit tests using JUnit and basic Mockito to validate business logic and reduce regressions.
- Use Git and GitHub for version control, participating in pull requests and code reviews with senior engineers.
- Collaborate within Agile Scrum teams, supporting sprint planning, daily stand-ups, task execution, documentation, and release preparation.

Environment: Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, MySQL, React, Bootstrap, Git, GitHub, Docker, JUnit, Mockito, Postman, Agile/Scrum

SIDE PROJECTS

Jaza | *Apr 2025 – Jun 2025*

- Web application built with ASP.NET Core and React, integrating backend and frontend services and SQL Server database hosted on MS Azure.

Floridex | *Jan 2024 – Dec 2024*

- Android application built with Kotlin, integrating backend services and MySQL databases hosted on AWS.

Ro's Bookstore | *May 2023 – Jul 2023*

- Backend API developed using Node.js with MySQL database integration and RESTful service design.
